CENTER OF EXCELLENCE

Enterprise Analytics & AI Intern Hiring Assignment

Dear Ajay Viswanagaraj,

Congratulations on clearing the first round.

As discussed, the next stage is a short 2-day practical assignment aligned to the COE Enterprise Excellence role. This is designed to assess your analytics capability, applied AI skills, system thinking, and governance awareness.

Please note: Due to confidentiality constraints, no internal COE documents or data will be shared. You are expected to create a simulated/sample dataset and sample COE documents for demonstration purposes.

Assignment Title: Mini COE Digital Enablement Prototype

Part 1 – COE Analytics Mini Dashboard

Create a simulated COE initiatives dataset (minimum 5–6 initiatives) containing fields such as:

- Initiative Name
- Owner
- Start Date
- End Date
- Status (On Track / Delayed / Completed)
- KPI Target
- KPI Achieved
- Business Benefit (₹ or % improvement)

Tasks:

- Perform basic data cleaning and EDA
- Build a simple dashboard (Streamlit / Python / Power BI / Tableau - Your Choice) showing:
  - Total initiatives
  - % On Track vs Delayed
  - Average KPI achievement %
  - Top 3 initiatives by benefit

Part 2 – COE AI Chatbot (RAG-Based)

Create 3–5 small documents using public sources such as:

- Lean principles
- Six Sigma overview
- Excellence frameworks
- KPI tracking best practices

(Use public PDFs, Wikipedia, articles, etc.)

Build a simple RAG chatbot:

Minimum Requirements:

- Document ingestion
- Chunking
- Vector store (FAISS/Chroma)
- Top-3 retrieval
- LLM-based answer generation
- Show retrieved text alongside final answer
- Basic confidence score (similarity-based or heuristic)

Interface:

- Streamlit OR FastAPI OR CLI

Part 3 – Governance & Adoption Note

In README, briefly explain:

1. Data privacy risks in enterprise AI
2. Hallucination risks in RAG
3. How you would improve reliability
4. 3 adoption metrics you would track (e.g., query resolution rate, usage frequency, accuracy feedback)

Keep it concise (1–2 pages max).

Deliverables

- GitHub link
- requirements.txt
- README with:
  - Architecture diagram (simple block diagram is fine)
  - Setup instructions
  - Design choices explanation
